

VectorSync Real-Time Pipeline

High-Throughput Continuous Stream ETL & Embedding Synchronization

PRODUCT SUMMARY

VectorSync provides automated change-data-capture (CDC) streaming between transactional databases and vector knowledge layers. It monitors database mutations via transaction logs and triggers instantaneous vector indexing updates across popular endpoints. Designed to maintain continuous data synchronicity with sub-second operational latency.

DEPLOYMENT MODEL & BASE COST

STANDARD BASE FEE

\$1,150 / month

Invoiced monthly in advance

INCLUDED BASE STACK TIER:

- Sub-Second Change Data Capture via WAL/Mutation Tracking
- Up to 5 Live Production Database Architecture Connections
- 50 Million Fully Synchronized Vector Mutation Events Monthly
- Hierarchical Parent-Child Token Chunk Alignment Models
- Native Target Integrations (Pinecone, Qdrant, and pgvector)
- Automated Schema Validation and Dynamic Field Remapping

FUNCTIONAL OPTIONAL ADD-ONS

Add-on Module	Functional Operational Scope	Incremental Pricing
Multi-Region Pipeline High-Availability Cluster	Configures automated active-passive pipeline instances across geographic clusters to ensure zero data dropouts.	\$350 / month
Proprietary Sentence Transformer Integration	Unlocks custom token weights mapping and real-time inference support for your proprietary embedding vectors.	\$500 / month
Immutable Historical Archiving Audit Trail	Secures an immutable raw payload history within isolated S3 Glacier configurations for compliance reviews.	\$150 / month

LEGAL COMMERCIAL TERMS & CONDITIONS

1. Operational Requirements: Client must maintain functional database connection string access permissions following TLS 1.3 encryption protocols.
2. Overage Allocation Adjustments: Volume extending past the baseline monthly tier is billed automatically at a flat incremental adjustment of \$0.05 per 10,000 vector events.
3. Liability Protections: Total provider liability arising out of synchronization lags or pipeline service interruptions is capped at fees paid over the immediate trailing 3-month cycle.
